

MUHAMMAD KASHIF LATIF

AI & MACHINE LEARNING ENGINEERING | PYTHON & INTELLIGENT SYSTEMS

Lahore, Pakistan | +92 314 4253900 | kashif.latif2004@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computer Science student with a 3.91 GPA and practical experience building AI/ML prototypes, recommendation systems, chatbots, data-driven prediction models, and full-stack applications. Completed three remote technical internships and developed projects across classification, regression, clustering, NLP-style text classification, recommendation logic, Generative AI integration, and computer-vision/deep-learning foundations using Python, Scikit-learn, PyTorch, Pandas, NumPy, and modern web technologies.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C, C++, HTML5, CSS3

Machine Learning: Classification, regression, clustering, recommendation systems, feature engineering, model evaluation

Algorithms & Models: Naive Bayes, SVM, Logistic Regression, Decision Trees, Random Forest, Linear Regression, K-Means, TF-IDF, cosine similarity

Libraries & AI: Scikit-learn, Pandas, NumPy, Matplotlib, PyTorch, neural networks, computer vision, Generative AI, LLM/API integration

Engineering Stack: React.js, Next.js, Node.js, Express.js, PostgreSQL, MySQL, MongoDB, Supabase, Git, GitHub, Vercel

EXPERIENCE

AI Engineer Intern | DecodeLabs

Remote | 2-month internship

- Developed a Python rule-based AI chatbot and a portfolio of machine-learning projects covering classification and regression, including customer purchase prediction, student-result prediction, email/text classification, heart-disease prediction, and electricity-bill estimation.
- Applied preprocessing and supervised/unsupervised learning techniques with Naive Bayes, SVM, Logistic Regression, Decision Trees, Random Forest, Linear Regression, and K-Means to translate datasets into practical prediction and pattern-discovery workflows.

Full-Stack Developer Intern | CodeAlpha

Remote | 2-month internship

- Built and deployed DishCraft, an AI recommendation application using content-based filtering, TF-IDF feature representation, cosine similarity, Top-N ranking, and cold-start fallback logic.
- Also delivered deployed full-stack/e-commerce applications including Lumina Luxe and NexWalk, strengthening the ability to integrate intelligent features into production-oriented web interfaces and data flows.

App Developer Intern | HexSoftware

Remote | 2-month internship

- Developed customer-facing application interfaces and login/authentication systems, gaining practical experience in application structure, user flows, form validation, and deployment.
- Combined application development with an AI/ML learning track to build user-ready software rather than isolated model notebooks.

AI/ML PROJECTS

DishCraft AI Recommendation Engine | JavaScript, TF-IDF, Cosine Similarity | [Live](#) / [GitHub](#) — Designed a content-based recommendation pipeline that represents user preferences and recipe attributes as weighted features, calculates similarity scores, ranks Top-N matches, and handles cold-start cases; deployed as an interactive web application.

Machine Learning Model Suite | Python, Scikit-learn, Pandas, NumPy | [GitHub](#) — Built multiple end-to-end learning projects: Naive Bayes email classification, SVM student pass/fail prediction, Logistic Regression customer purchase prediction, Random Forest heart-disease classification, Linear/Decision-Tree electricity-bill prediction, employee-attribution prediction, and K-Means clustering for stock-market pattern discovery.

Rule-Based AI Chatbot | Python, Conversational Logic | [GitHub](#) — Created a command-line chatbot using rule-based intent/response logic, structured conversational flows, and Python control logic as an early intelligent-systems project.

COMCAT University Portal + AI Assistant | Next.js, TypeScript, PostgreSQL, Supabase | [Live](#) / [GitHub](#) — Built a multi-role university management system with authentication, academic and administrative workflows, API-driven CRUD operations, and an integrated AI chatbot, demonstrating the integration of intelligent assistance into a larger software product.

Additional AI & Python Work | Python, ML, Generative AI | [GitHub](#) — Includes GPT-style conversational UI, PDF AI assistant, real-time Python chat systems, classification/regression experiments, clustering models, and ongoing deep-learning/computer-vision work with PyTorch and neural networks.

EDUCATION

BS Computer Science | Minhaj University Lahore | **GPA: 3.91/4.00**

Sep 2024 - Expected 2028
